5. wc Unix Utility

1. in combination with `head` and `sed`, we can count the number of columns in a csv counting words (excluding special column enclosed in quotes).

```
head -1 train.csv | sed 's/,/ /g' | wc -w
```

Possible output:

```
1        785
```

2. if we want to count the lines of multiple files at the same time and also have the total:

```
1  wc -l *.csv
```

Possible output:

```
1     15001  test.csv
      26998  train.csv
3     41999  total
```
